f. foodaily.

CATERING SOFTWARE

Meals for kindergartens, schools and companies, without paperwork or phone calls.

From menu to delivery in one application: users order on their own, and the kitchen, warehouse and drivers get exactly what they need.

ORDERS

Lists are collected by phone, messaging apps and spreadsheets

Mornings go to copying lists and last-minute cancellations.

With Foodaily: parents and employees order and cancel on their own before the deadline you set. The list per institution and class is ready right away.

KITCHEN AND WAREHOUSE

Ingredients are calculated by hand, every day

Too much or too little stock, and nobody knows the exact cost per meal.

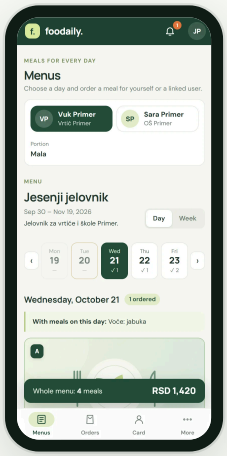
With Foodaily: the production plan and ingredient list are calculated from orders and recipes, with a cost estimate and warehouse issuing by lot.

SAFETY AND DELIVERY

Allergies, labels and routes are kept on paper

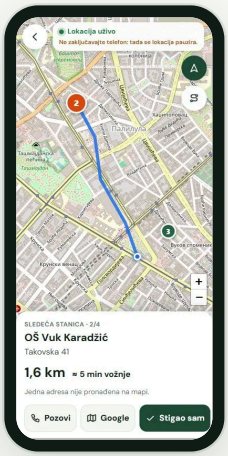
A single allergen mistake is a serious problem.

With Foodaily: the app warns about allergens, prints a label for every meal, and the driver sees the route and deadline on the phone and confirms delivery.



Parent or employee
Orders on the phone, in Serbian or English.

Kitchen
Production plan: ingredients, packaging and cost estimate for the whole day.



Driver
Next stop, directions and proof of delivery.

YOUR WHOLE OPERATION IN ONE PLACE

- Menus
- Orders
- Wallet and payments
- Warehouse
- Production
- Labels
- Delivery notes
- Driver routes
- Canteen and QR cards
- Reports

WHO IT IS FOR

- Caterers serving kindergartens, schools and after-school care
- Staff meals and company canteens: shifts, QR cards and a tablet at the serving line
- Caterers that already have an ordering app but need warehouse, production and delivery

HOW WE START

1 20-minute demo
We walk through one of your working days in the system.

2 Data setup
Together we enter menus, dishes, institutions and users.

3 Pilot
Start with one institution or company, then roll out.

Meals on time. Every day.
Book a demo and watch the videos on our website.
